*Excellent soil preparation* **AKER**

# AKER

/ Excellent stubble cut /

/ Also for high speed /

/ Good penetration /

## The new AKER curved wave disc

The new AKER curved wave disc from Bellota is a specially-designed disc for ploughing the soil and preparing the seed bed, with **excellent stubble cutting** capability in all soil types.

The Bellota disc is designed with eighteen tangential waves that produce excellent cutting capability with minimum vertical force. The number of waves and their height ensure that the ploughed strip of soil is greater than with other discs and consequently, the effective seeding depth is enhanced. This effect also encourages new roots to grow because they accelerate the mineralisation process of organic material around the seed.

This disc provides very good penetration even with severe ground conditions and is also suitable for operating with high speed.

your best help.

## Wide range of diameters:

All models are designed with **eighteen waves** for improved furrows and the central plate is 220 mm.

Ø"	Ø mm	Thickness	Weight in g	Wave height
15"	381	4	3,380	12
16"	404	4	3,830	12
17"	431	4,5	4,790	12
18"	455	5	5,890	12,5
20"	506	5	7,430	12,5
22"	580	5	9,570	12,5

It is available in the various hole-configurations for seeding hubs.
